Click&Clean

Taking your clothes to the dry cleaning/laundry and picking them up is much easier with the smart Click&Clean lockers

Drop Point Systems lockers make the process of delivery and collection of garments automatic and 24/7, so we all save time. In addition, companies specialized in garment washing optimize their staff tasks, which allows them to expand their business by putting up lockers in different geographical areas.

HOW DOES IT WORK?

- 

1 The user logs on our client's website, selects the pieces to be washed and chooses a delivery point. Then, he makes the payment and automatically receives a code.
- 

2 The user goes to the delivery point and enters the code in the access control to get into the building. Then, he types/shows the code on the locker reader and the locker opens for him to leave his clothes.
- 

3 When the clothes are clean and ready to collect, the user gets an email and/or SMS.

SMART LOCKERS OF DIFFERENT SIZES TO CHOOSE THE MOST SUITABLE FOR YOU!

- Special sizes to leave your clothes folded or hung on a hanger, half-length or full-length. A rack can be fixed into the locker.
- If you want to hang a larger number of items, we can produce the most suitable locker width for you.

What if your business needs more lockers?

Such modular system allows your locker to grow easily. Drop Point Systems can increase the capacity of a facility as the demand for service increases.
