Solution for pick-up and delivery of online purchases or custody of personal items

Our workplace is where we spend most of the day. Therefore, it has become more and more usual for workers to give the company name where they work as a shipping address. The result is a pile of parcels on shelves that nobody controls.

DROP POINT SYSTEMS SMART LOCKERS CAN PROVIDE 3 SERVICES:

1 Pick-up and delivery of all online orders from/ addressed to workers.

A simple interface locates the worker's name, without exposing contact details, and allows the carrier to deliver a parcel in seconds. He just needs to select the person's name and size of locker to make the deposit. The recipient automatically receives a code by email and/or SMS to withdraw the order.

2 Delivery of documents or items from a worker to another workmate.

The recipient receives a code by email/SMS for the pick-up as if it were a shipment in his name.

3 Storage of objects in smart lockers for personal use.

A safe place to store objects is very convenient (helmet, gym bag...). For this reason, some of the lockers can be reserved for personal use. In this case, the user uses the same code all the time. If the locker has a two-dimensional reader or NFC reader, he'll just have to get the mobile close to open it.

ALSO A SOLUTION FOR:

Neighbourhood associations: with the rise of e-commerce, apartment blocks and residential areas are filled with packages coming at times where the owners are not at home and so, we see parcels dropped at the entrance. Smart lockers are the solution. And they can also have other uses, such as being a safe place to keep the keys for the cleaning staff.

Companies in general: To manage shipments and pick-up without the need to be waiting for the arrival of the carrier.

Campsites: very useful to campsite users to pick up their online purchase during their stay. By using lockers, they forget about queuing at the supermarket and will safely receive their orders.

Co-working areas: very practical for pick-up and delivery or custody of products.

AND REMEMBER: you can use the locker to advertise your company!
